### Inland deliveries of petroleum products in 1989

In 1989 deliveries of petroleum products within the Community amounted to approximately 455 million tonnes, 1% up on the previous year (450.5 million tonnes). This increase is below the overall rate of increase in energy consumption, which for 1989 should be up approximately 2.5% on 1988.

The situation regarding the main products is as follows :

- A sharp increase in deliveries of residual fuel oil (+6.0%), bringing to an end a downward trend unbroken since 1979. This was due to an increase in the use of this product in conventional thermal power stations.
- An increase in deliveries of motor fuels (+1.7%) and aviation fuels (+2.8%). It should, however, be noted that these growth rates are significantly down on 1988 (+3.2% and +6.3% respectively).
- Lastly, a decrease in deliveries of gas oil and diesel oil (-2%). This decrease masks differing use-related trends in consumption: approximately +6.7% for transport compared with approximately -9% for all other uses, particularly heating.

The main trends in the various countries were as follows:

- A considerable drop in total deliveries in Belgium, Denmark and the Federal Republic of Germany (-3.9%, -5.3% and -6.4% respectively). This trend is matched by deliveries of gas oil and diesel oil (-4.9%, -6.4% and -12%) and residual fuel oil (-12%, -13.5% and -17.4%).
- A considerable increase in total deliveries in Spain, Luxembourg and Portugal (+6.5%, +8% and +27.1%). The increase in Portugal was due to greater use of residual fuel oil (+80%) in conventional thermal power stations following the marked decrease in hydroelectric energy production.
